Session 11: Peer-to-Peer
Chair: Antony Rowstron (Microsoft Research)

- The Impact of DHT Routing Geometry on Resilience and Proximity .................................................................381
  K. Gummadi (University of Washington),
  R. Gummadi (University of Southern California),
  S. Gribble (University of Washington), S. Ratnasamy (Intel Research),
  S. Shenker (International Computer Science Institute),
  I. Stoica (University of California at Berkeley)

- Graph-Theoretic Analysis of Structured Peer-to-Peer Systems: Routing Distances and Fault Resilience ..................395
  D. Loguinov, A. Kumar, V. Rai, S. Ganesh (Texas A&M University)

- Making Gnutella-like P2P Systems Scalable .................................................407
  Y. Chawathe (AT&T Labs), S. Ratnasamy (Intel Research),
  L. Breslav (AT&T Labs), N. Lanham (University of California at Berkeley),
  S. Shenker (International Computer Science Institute)
