

Switching platforms can influence flight ticket prices by 19%

Title: What you pay depends on where you pay

Internet Measurement Conference

Godfried Meesters

Motivation: So far, manual investigations report price differences up to 8% between different outlets when booking flight tickets.

Method: By synchronising mobile apps and browsers, we structurally measure price differences for 6 travel vendors.

Results: While most vendors show consistent prices, we found various differences for two of the six.
