

Optimizing Rules Placement in OpenFlow networks: Trading routing for better efficiency

**NGUYEN Xuan-Nam, Damien Saucez,
Chadi Barakat, Thierry Turletti**

DIANA – INRIA Sophia Antipolis, France

Motivation

Today

**Manual configuration,
Complicated, Error prone**

With SDN/OpenFlow

**Blackbox: Abstraction,
High-level policies**

OpenFlow Rules Placement Problem

Endpoint policy

Routing policy

Challenge: Memory limitation

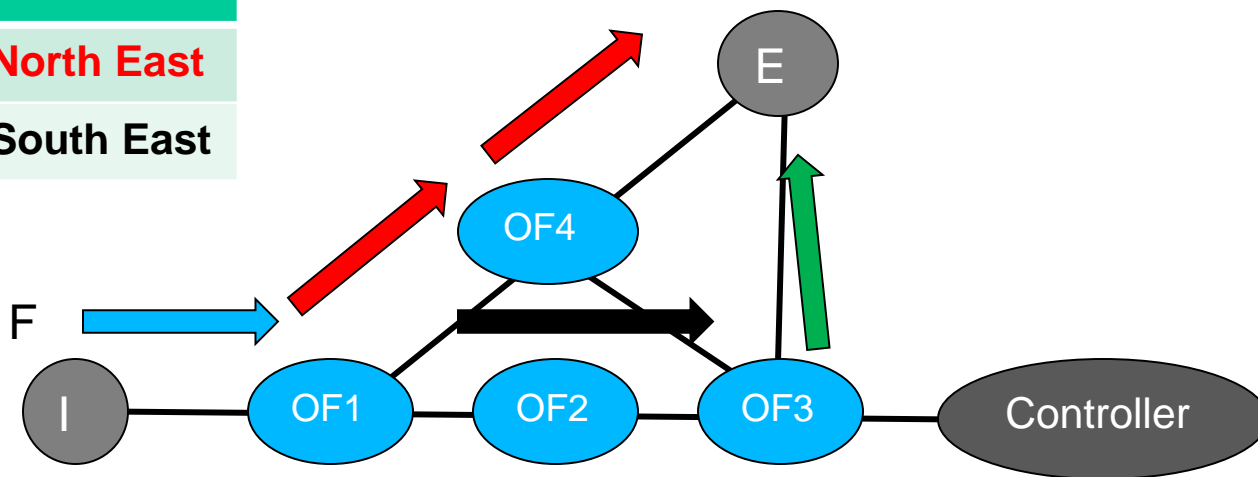

Recent solutions: Network-wide Optimization

Trading routing for better efficiency

- Loose routing policy: no loops, no memory and link overload

Match	Port
F	North East
Default	South East

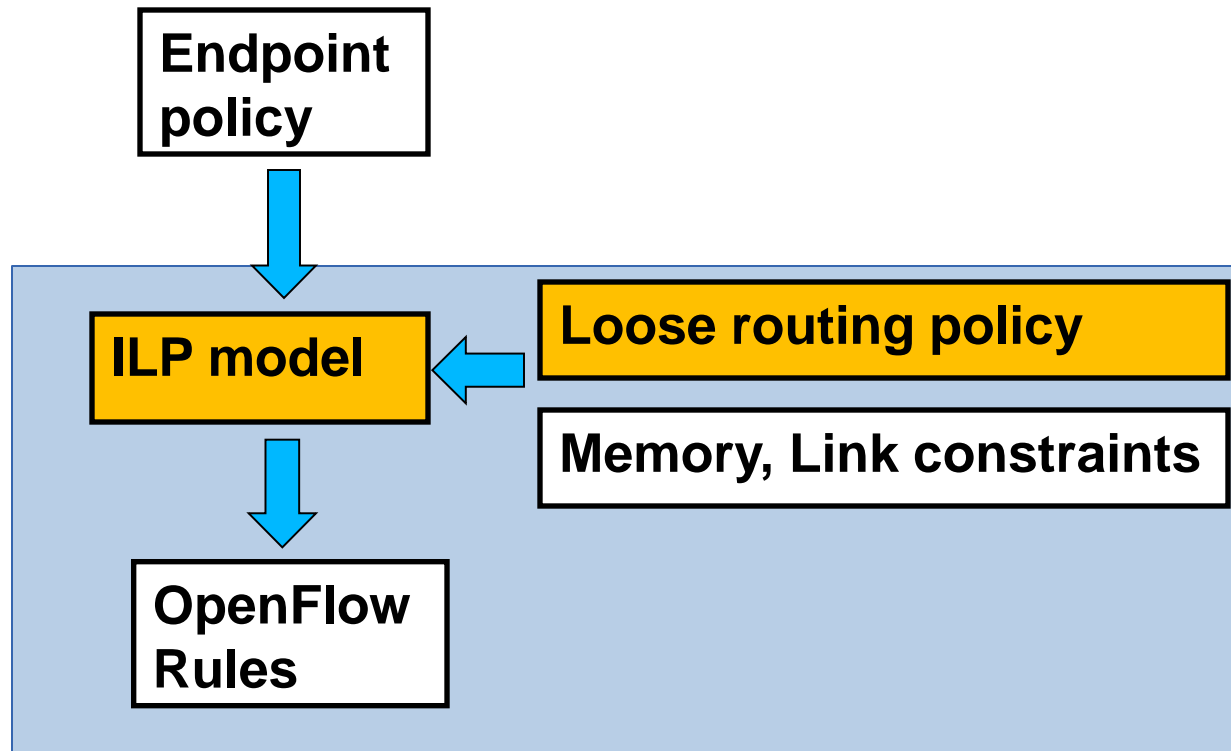

Match	Port
F	North East
Default	East

Match	Port
Default	East

Match	Port
F	North
Default	East

Our Methodology

Outperform existing solutions in memory-constrained networks
